

## One shared view. Clear action.

A precise, minimal identity for the operating system that connects projects, updates, logistics, status, and execution.

# The operating rhythm

PULSE turns scattered activity into a current, shared, and actionable view of the work.

## From information to coordinated execution.

The name PULSE works on two levels. It is the acronym for the platform's core functions, and it is a metaphor for the continuous signal that tells a team whether the mission is healthy, moving, and under control.

### BRAND PROMISE

See the work.

Understand the state.

Move the mission.

P

### PROJECTS

Structure ownership, milestones, tasks, and outcomes.

U

### UPDATES

Keep the picture current through a consistent operating cadence.

L

### LOGISTICS

Coordinate people, documents, travel, reviews, and dependencies.

S

### STATUS

Create one trusted view of progress, risk, and workload.

E

### EXECUTION

Turn visibility into decisions, accountability, and completion.

# A signal moving through the system

The wordmark is deliberately restrained. Its character comes from the internal dots, the external dot pair, and the movement they create together.

## 01 Input / awareness

The upper internal dot reads as a signal entering the operating picture: an update, observation, or new piece of work.

## 03 Clarity through space

Wide tracking gives each function room to remain distinct while still operating as one system.

## 02 Output / action

The lower internal dot completes the pulse: a decision, handoff, approval, or action leaving the system.

### CORE INTERPRETATION

**Information in. Coordinated action out.**

The dots create motion without adding complexity.

# One identity, four practical forms

Use the form that best matches the available space and the level of brand emphasis required.

## PRIMARY WORDMARK

P U L S E

Default for documents, application headers, presentations, and signage.

## REVERSED WORDMARK

P U L S E

Use on solid dark fields or photography with strong contrast.

## DOT MARK

Use for icons, avatars, loading states, and compact digital surfaces.

## SECONDARY LOCKUP

•• P U L S E

Two dots lead into a clean PULSE letterform with no internal dots.

## PROTECT THE SIGNAL

### Keep the identity disciplined.

✗ Do not move the dots

Their placement is the defining gesture.

✗ Do not stretch the mark

Scale every form proportionally.

✗ Do not add effects

Avoid shadows, outlines, gradients, and glows.

✗ Do not use status colors

The identity stays black or white.

# Two dots. Then PULSE.

The secondary lockup places the two-dot mark to the left of a clean, dot-free PULSE wordmark. Extra separation keeps the pair distinct while the full signature still reads as one unit.

External two-dot mark + plain PULSE letters (no internal dots)

## PAIR

Keep the original upper-left to lower-right diagonal.

## GAP

Leave approximately 1.5D to 1.75D between the pair and PULSE.

## WORDMARK

Use the plain PULSE letters with no dots above U or below S.

## CONSTRUCTION RULES

### Give the pair room to lead.

- 01 Use the supplied secondary lockup asset whenever possible.
- 02 Keep the PULSE letters free of the internal dots used in the primary wordmark.
- 03 Keep the dot pair on its original diagonal and preserve the wider gap.
- 04 Use black on light fields and white on dark fields only.

#### USE THE SECONDARY LOCKUP FOR

- Splash and loading screens
- High-visibility horizontal signatures
- Branded dividers with generous width
- Selected presentation or document covers

# Clear space preserves authority

The identity should never compete with nearby type, interface controls, or page edges.

## PRIMARY WORDMARK

One dot diameter defines the margin.

Keep at least 1D around the full wordmark. For the standalone dot mark, retain at least 0.75D on every side.

## MINIMUM SIZE

Stay legible, not merely visible.

# Monochrome identity, purposeful interface color

Black and white carry the brand. Supporting colors organize information and communicate state without weakening the logo.

## CORE IDENTITY

The identity only appears in black or white.

## SUPPORTING DIGITAL PALETTE

Color should clarify an action or state.

# Calm, direct, operational

The visual system should feel precise without feeling cold. Language should reduce uncertainty and make the next action obvious.

## RECOMMENDED TYPE FAMILY

# Inter

Modern, neutral, legible, and built for digital systems.

### DISPLAY

### DATA

12 OPEN / 4 BLOCKED / 8 IN REVIEW

Inter Medium

## VOICE PRINCIPLES

## Write for the person who must act next.

### CLEAR BEFORE CLEVER

Use familiar words and state the action, owner, and timing.

### SPECIFIC, NOT VAGUE

Replace general status language with a concrete condition or decision.

### CALM UNDER PRESSURE

Communicate risk directly without adding drama.

### ACTIVE AND ACCOUNTABLE

Prefer verbs: review, assign, approve, complete, escalate.

**WEAK**      The associated task may require review.

**PULSE**      Review the task by 1600 Friday.

# Designed to disappear into the work

The identity should frame the operating picture, not compete with it.
